

Mydala is hiring for mysql Database Administrator

Location-	New Delhi
Position Type-	Full Time
Education-	Minimum BS Computer Science or equivalent
Work Experience-	Min. 5 years' experience as a DBA or equivalent

If being the hero and not just 'the tech guy' sitting in a dark cavernous corner is what you want, come on over to our Technology Team. You think you can list at least 3 strategies to hot-backup a live db running at 10 queries per second without a single second of downtime. Then, you are applying at a right place.

Roles and Responsibilities

- Develop and support MySQL database replication
- Optimize MySQL database performance
- Estimate MySQL database capacities; develop methods for monitoring database capacity and usage
- Establish mechanisms for data backup/restore of relational databases; provide restoration services as needed
- Develop and optimize physical design of MySQL database systems
- Develop application-specific fault-tolerant distributed database mechanisms
- Design, create and implement new database environments including HA and replication setups.

The list grows on and on every day :-)

Ideal Candidate

- Demonstrated experience with relational database physical design
- Demonstrated experience with relational database performance tuning and capacity planning especially on MySQL based environments
- Experience with open source/linux development and production environment is CRITICAL
